### SYNOPSIS

This course is intended to be a comprehensive review of selected subject matter related to the assessment, treatment planning, surgical management, prosthodontic restoration, and maintenance of dental implants. The information in this course may prove helpful in preparing for the incorporation of dental implantology into a clinician's practice activities.

It should be noted that a two day review course is not intended to substitute for in-depth training in the discipline of oral implantology.

The content of this program may prove to be helpful as an adjunct in preparation for written and oral examinations where a clinical and theoretical knowledge base in oral implantology is necessary. Completing this course of study in no way guarantees that the attendee will be successful in challenging any dental board certification examination.

### PROGRAM LEARNING OBJECTIVES

At the conclusion of this program, participants should be able to:

- Gain insight into the ABOI/ID oral examination process
- Develop a strategy on how to defend their cases during the examination
- Discuss implant topics including basic science, clinical diagnosis, implant prosthetics and implant surgery
- Improve presentation skills in preparation for the ABOI/ID oral examination
- Widen their personal perspective by taking part in a discussion formation with faculty and colleagues no way guarantees that the attendee will be successful in challenging any dental board certification examination.

Disclaimer: This course is neither mandatory nor recommended as the official guide by the American Board of Oral Implantology/Implant Dentistry (ABOI/ID) and thus should not be construed as an official guide in the preparation for any certifying board examination.
