- Diplomate, American Board of Periodontology
- Private practice limited to periodontics and dental implant surgery

Whether you plan to take the ABOI/ID Board examination or simply want to update your implantology knowledge, this **TWO-DAY** program is for you . . .

SYNOPSIS

This course is intended to be a comprehensive review of selected subject matter related to the assessment, treatment planning, surgical management, prosthodontic restoration, and maintenance of dental implants. The information in this course may prove helpful in preparing for the incorporation of dental implantology into a clinician's practice activities.

It should be noted that a two day review course is not intended to substitute for in-depth training in the discipline of oral implantology.

The content of this program may prove to be helpful as an adjunct in preparation for written and oral examinations where a clinical and theoretical knowledge base in oral implantology is necessary. Completing this course of study in no way guarantees that the attendee will be successful in challenging any dental board certification examination.

PROGRAM LEARNING OBJECTIVES

At the conclusion of this program, participants should be able to:

- Assess common patient data collection to help in developing a treatment plan that will address the patient's needs and desires
- Develop a comprehensive understanding of how a patient's medical history and medications can play a significant role in case outcomes (positive and negative)
- Determine which prosthetic treatment plans will produce a positive long-term prognosis for the patient.
- Understand anatomical factors that can hinder a case surgically and how to remedy those types of cases effectively
- Predict which hard and soft tissue grafting techniques will produce an optimal outcome
- Evaluate and develop criteria to determine how best to treat an ailing or failing implant
- Compare and contrast different ideologies from dental implantology experts

Disclaimer: This course is neither mandatory nor recommended as the official guide by the American Board of Oral Implantology/Implant Dentistry (ABOI/ID) and thus should not be construed as an official guide in the preparation for any certifying board examination.

SCHEDULE

Friday, February 5, 2016

MODULE 1 8am – 12pm Barry K. Bartee, DDS, MD

- Overview of the examination process
- Assessment and workup of the implant patient
- Treatment planning with emphasis on the esthetic zone
